

SONDAGGIO

- Durante il sondaggio vanno mantenuti sempre indossati i guanti per evitare con il calore delle mani di creare delle croste di ghiaccio sulla sonda, creando di conseguenza un'ulteriore difficoltà di penetrazione nel terreno
- La sonda va sempre introdotta perpendicolarmente al terreno

← SONDA

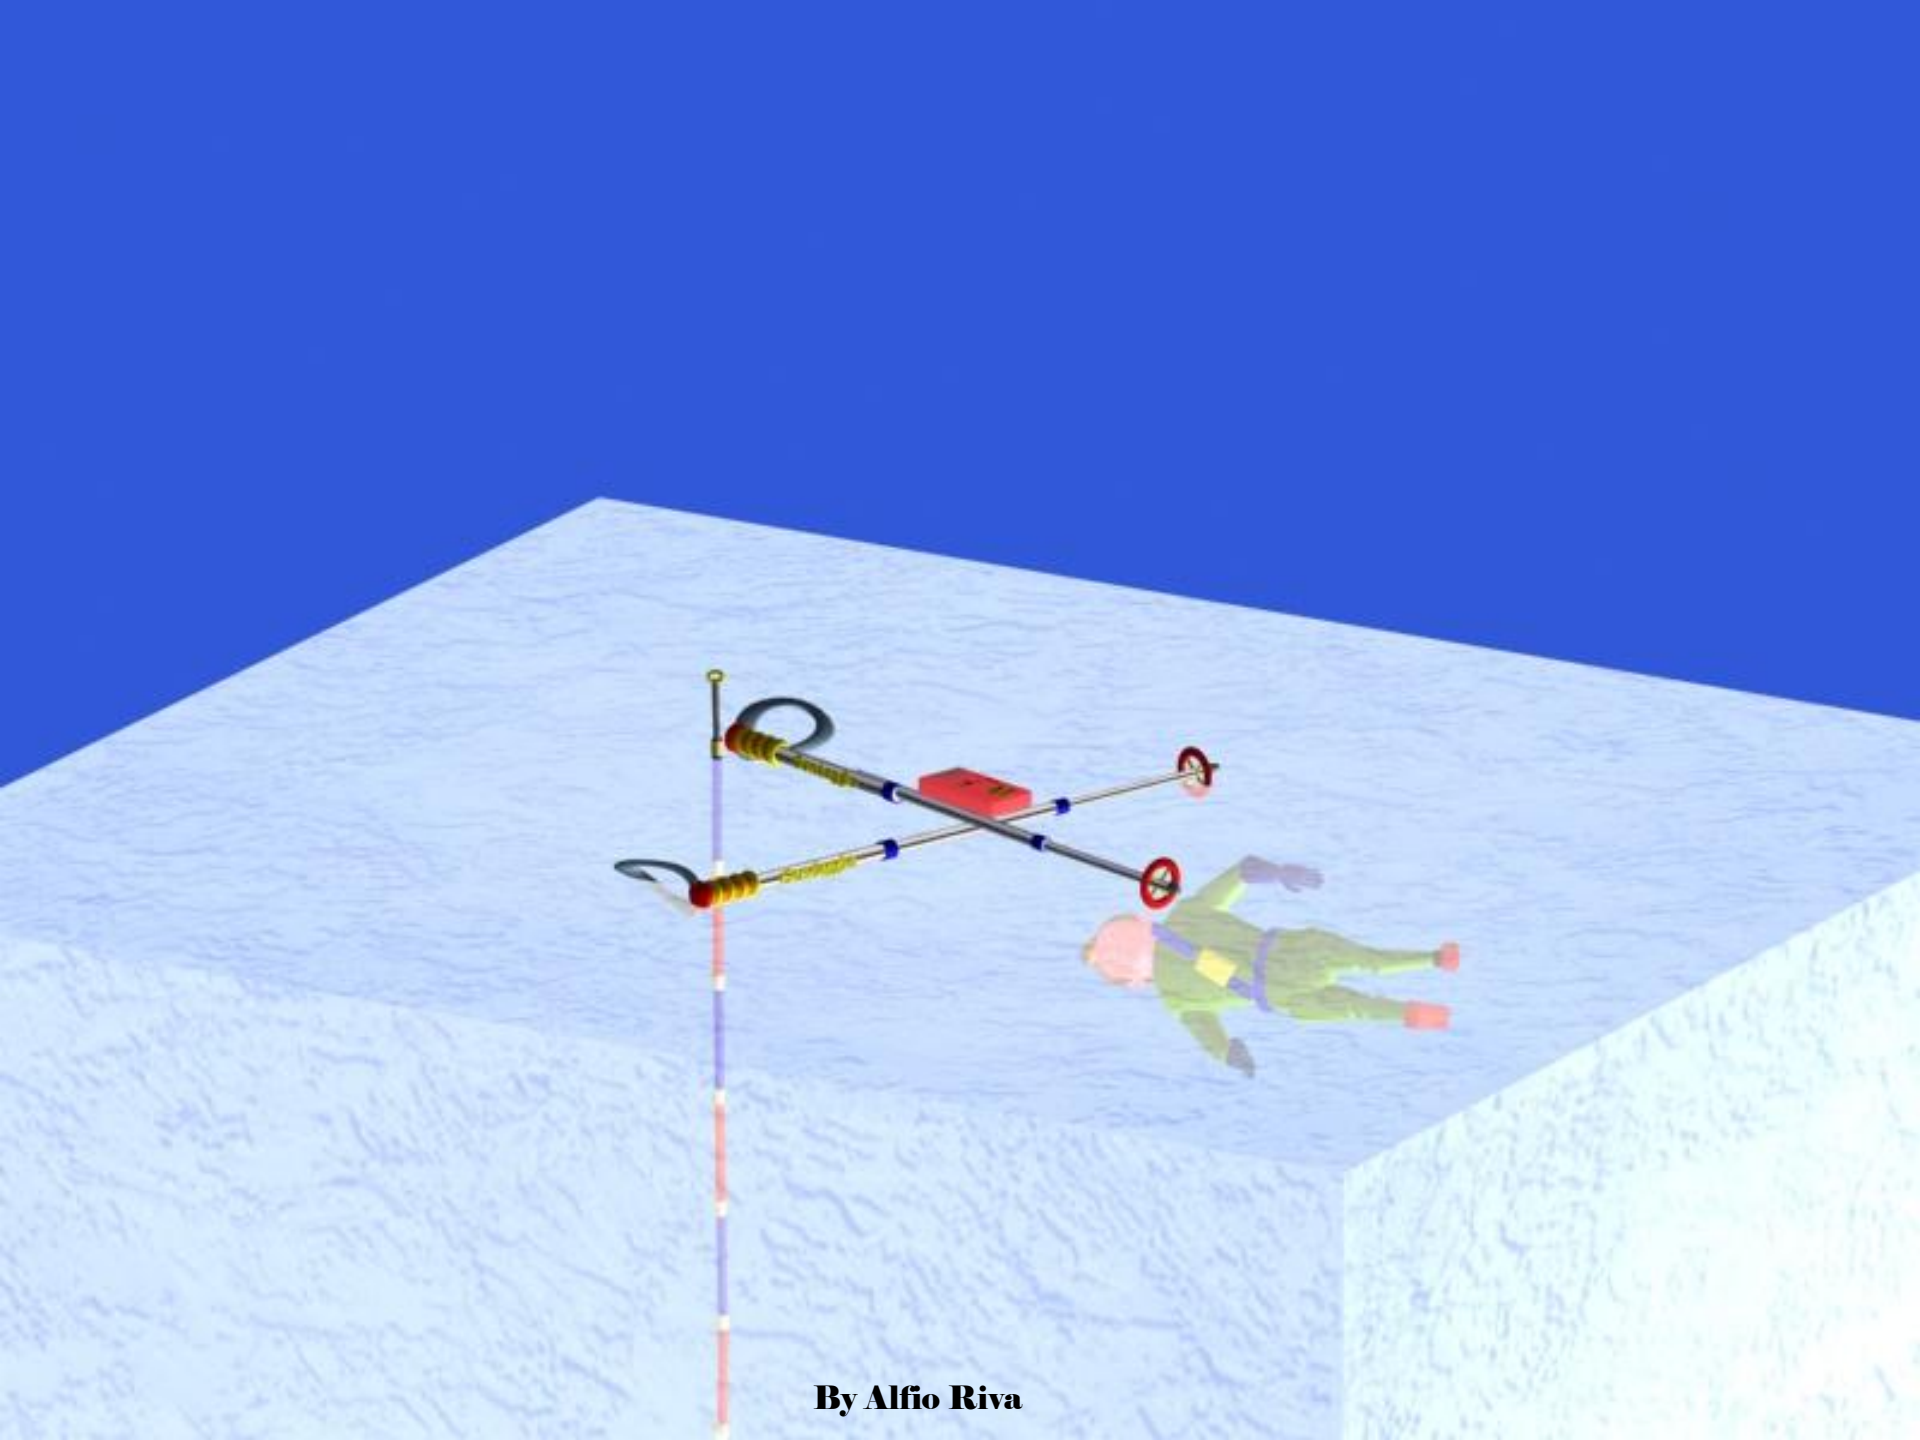

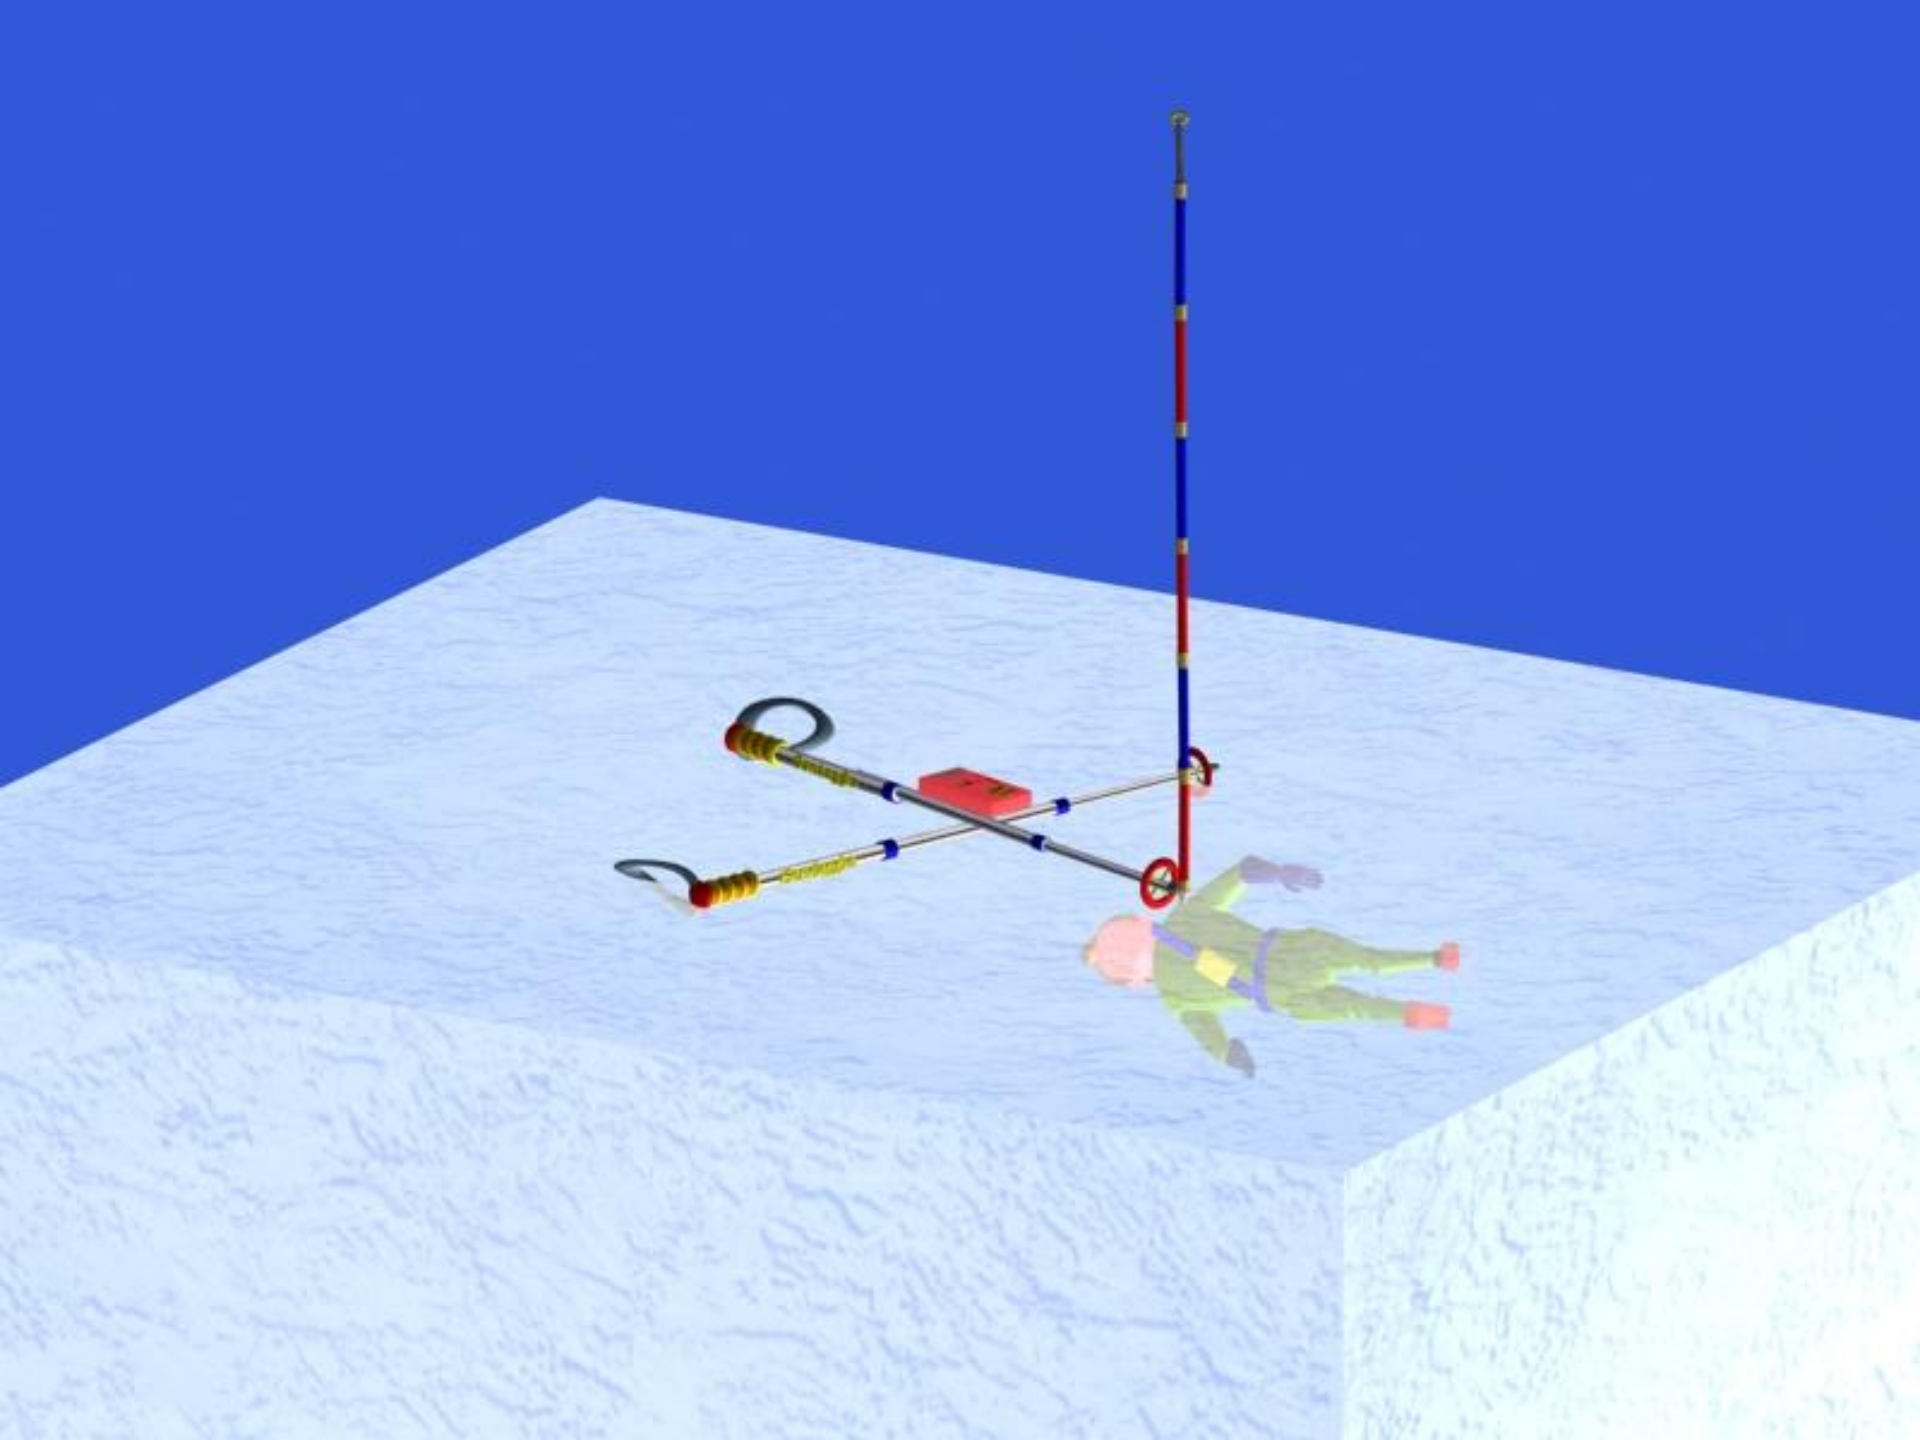

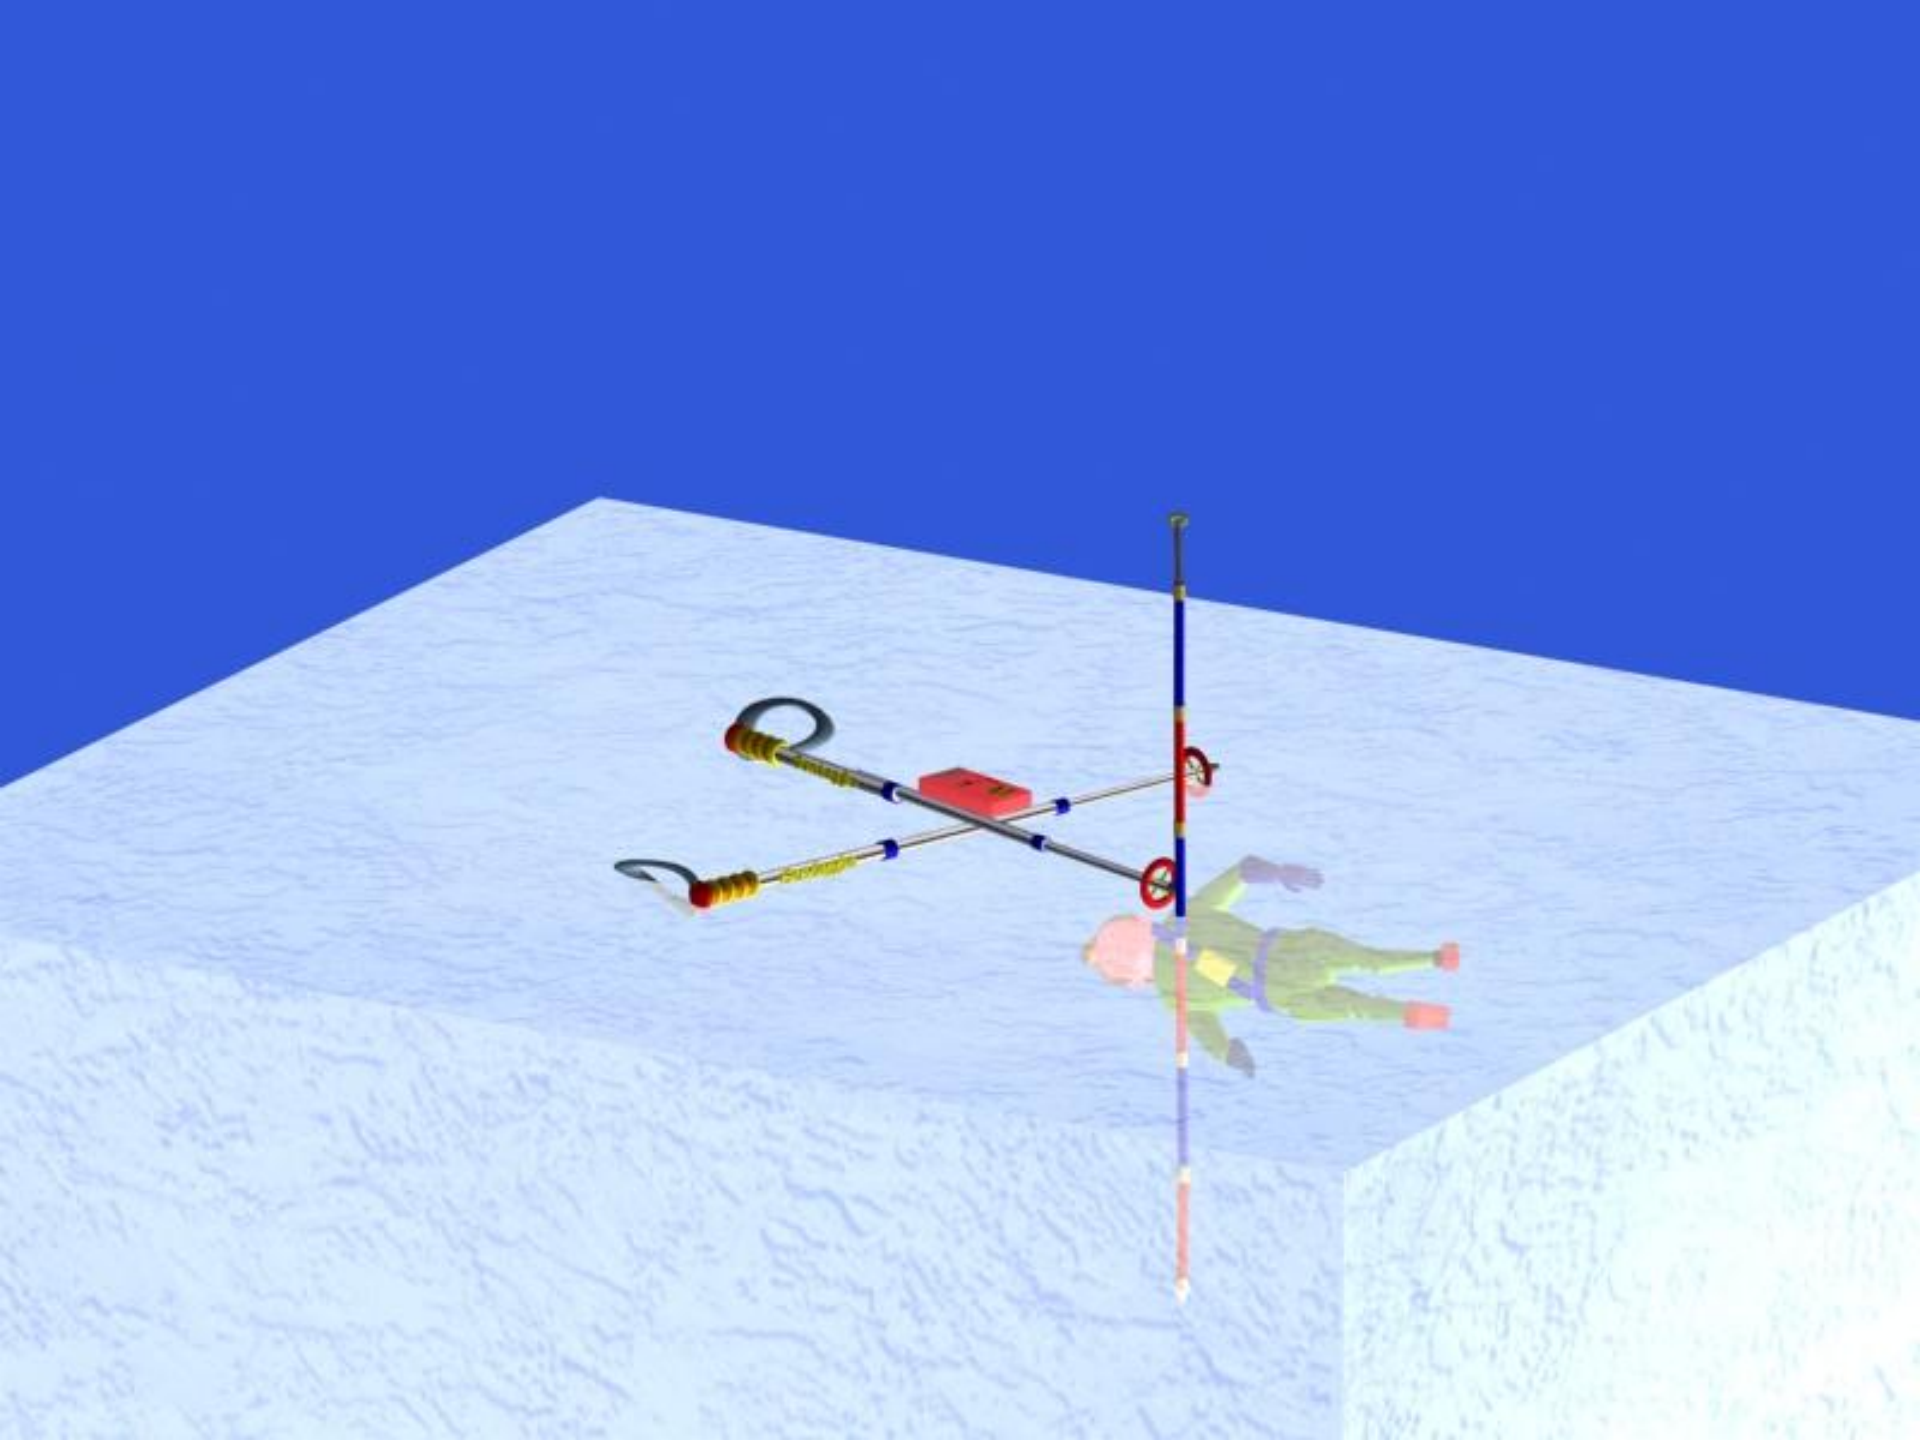

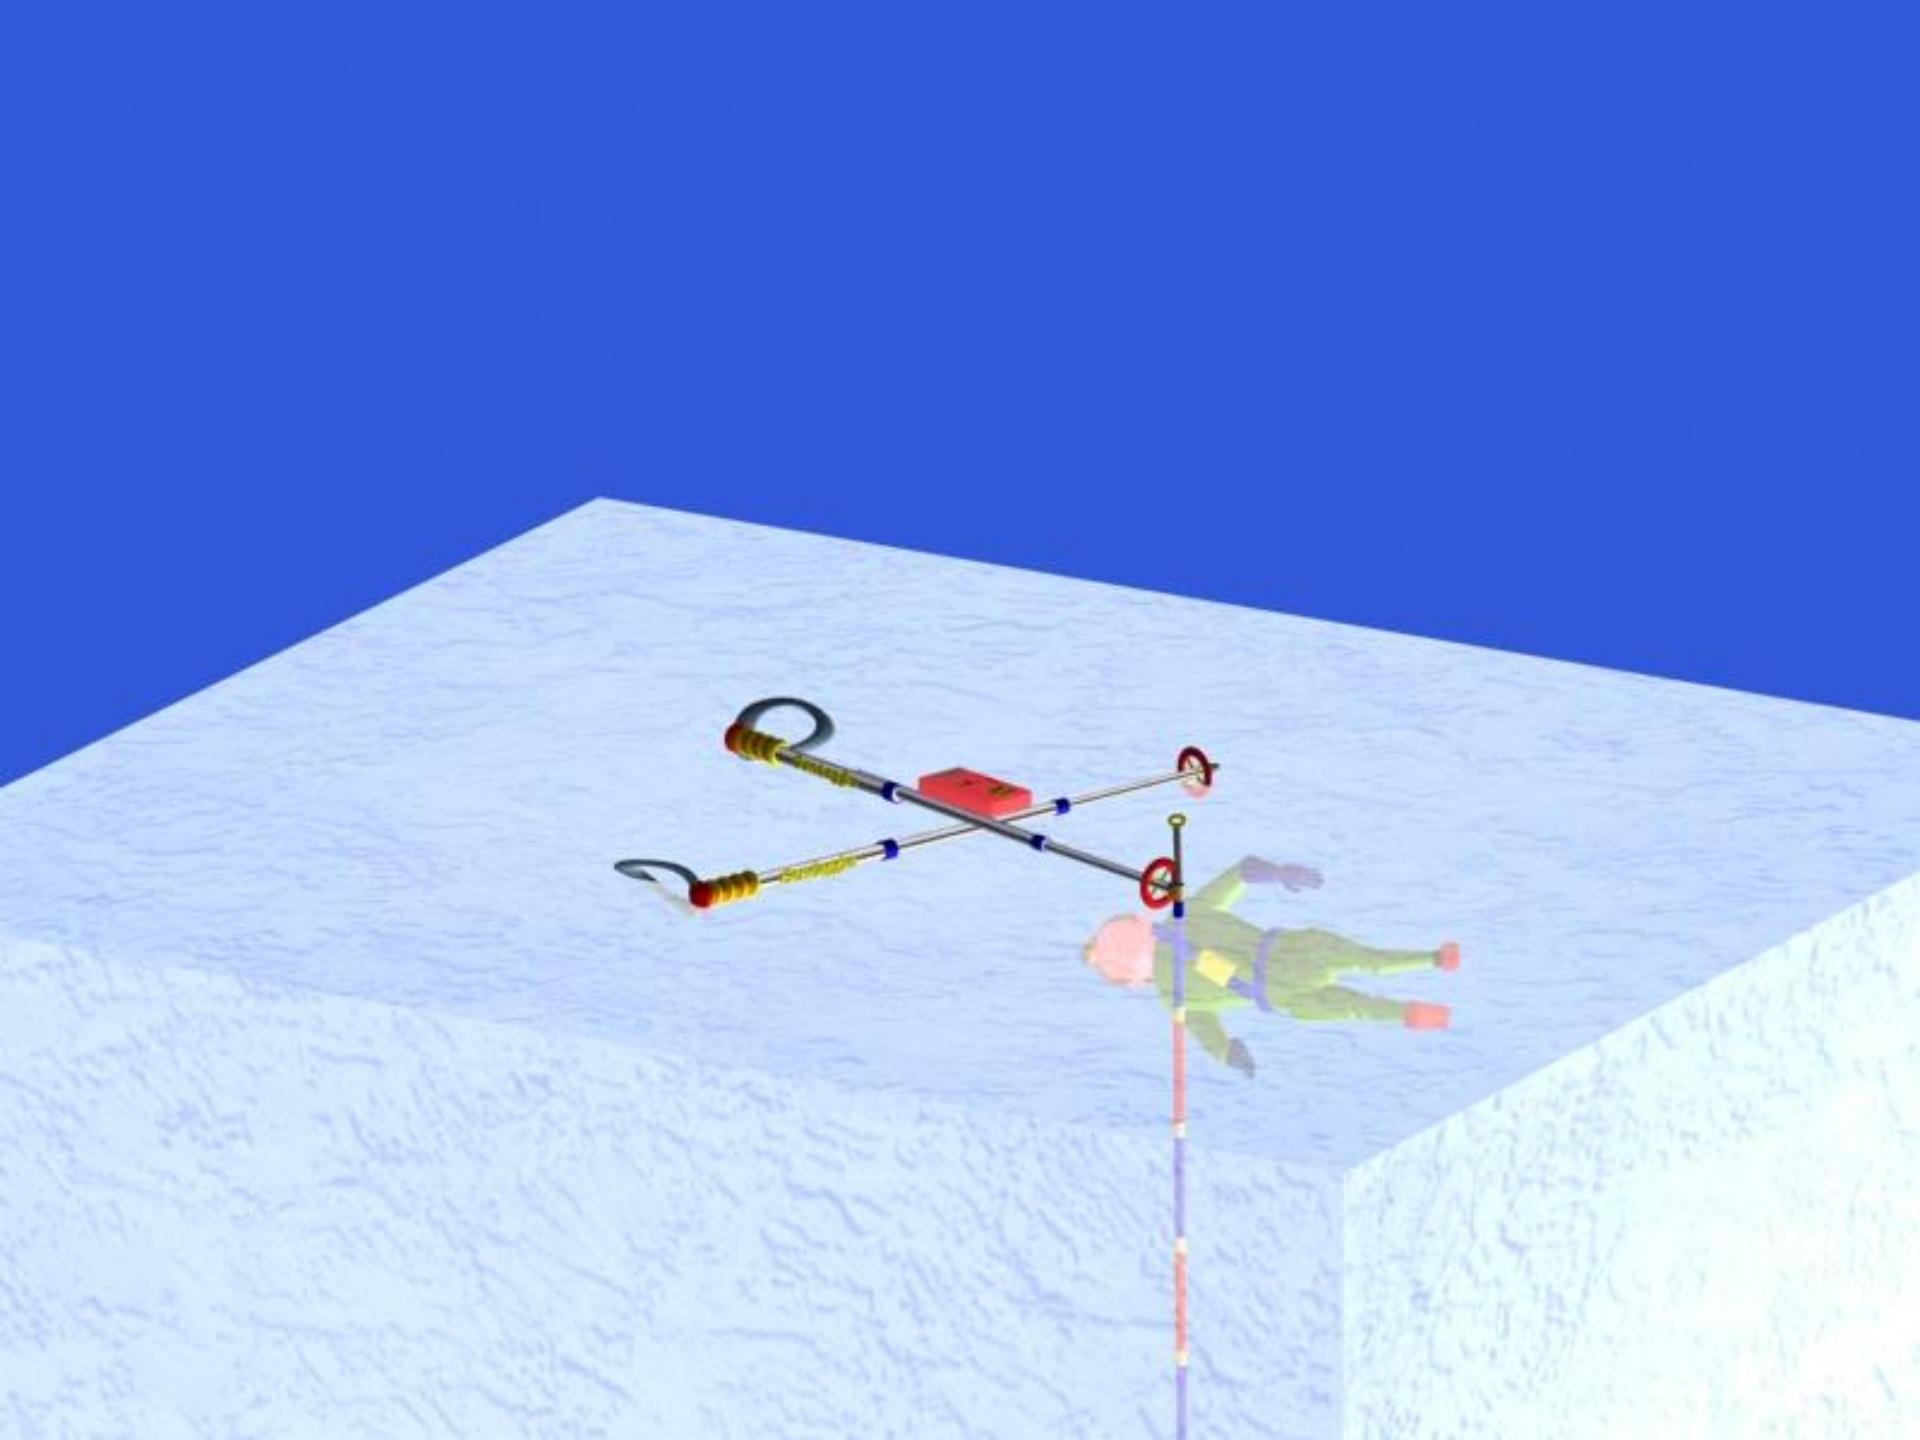

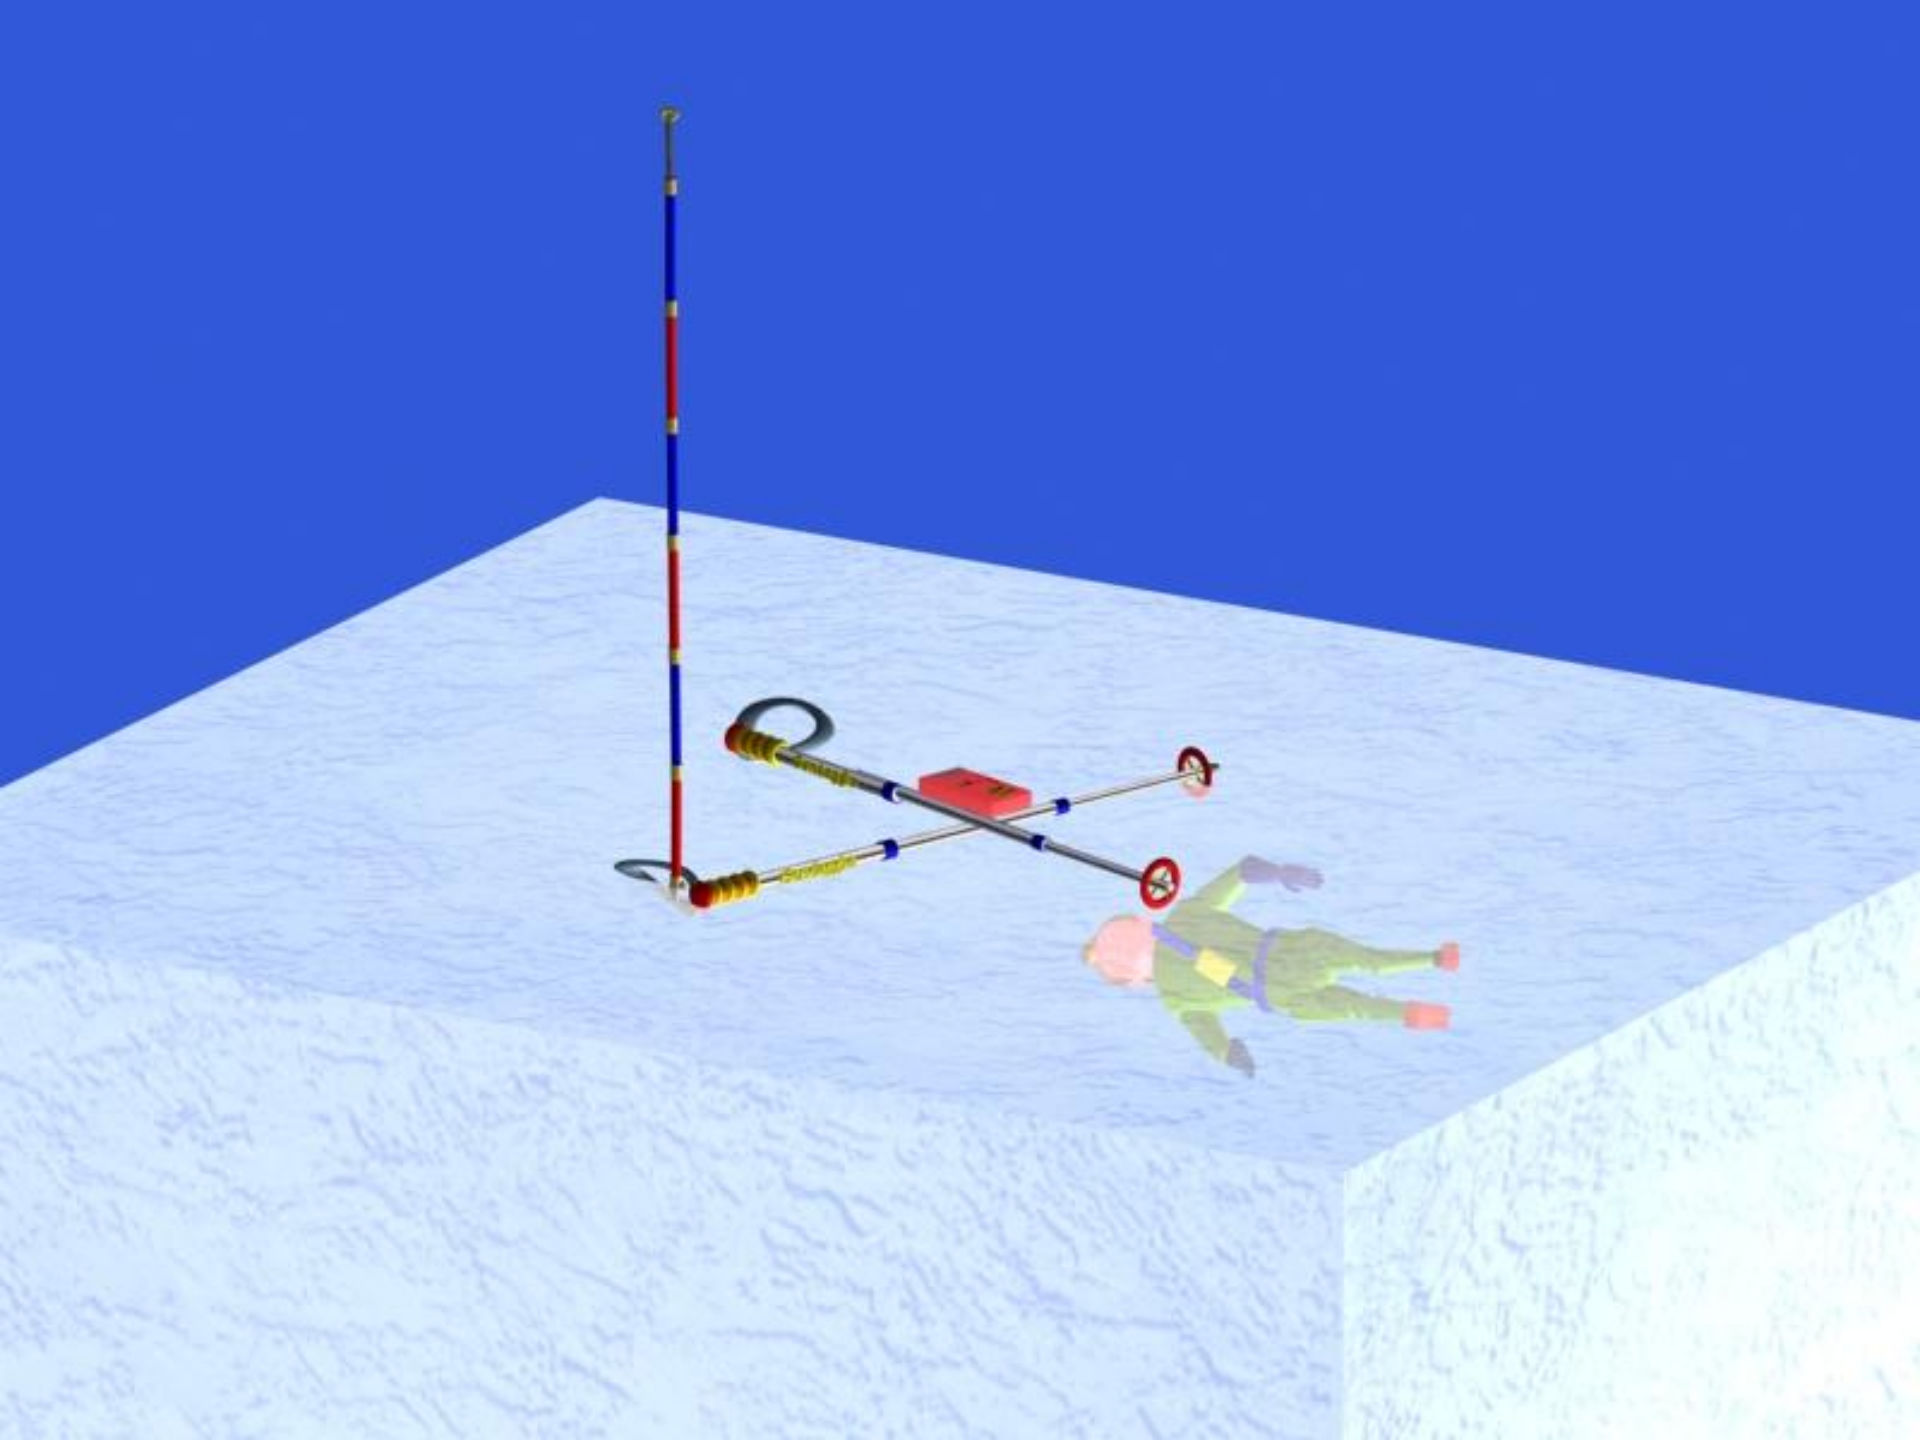

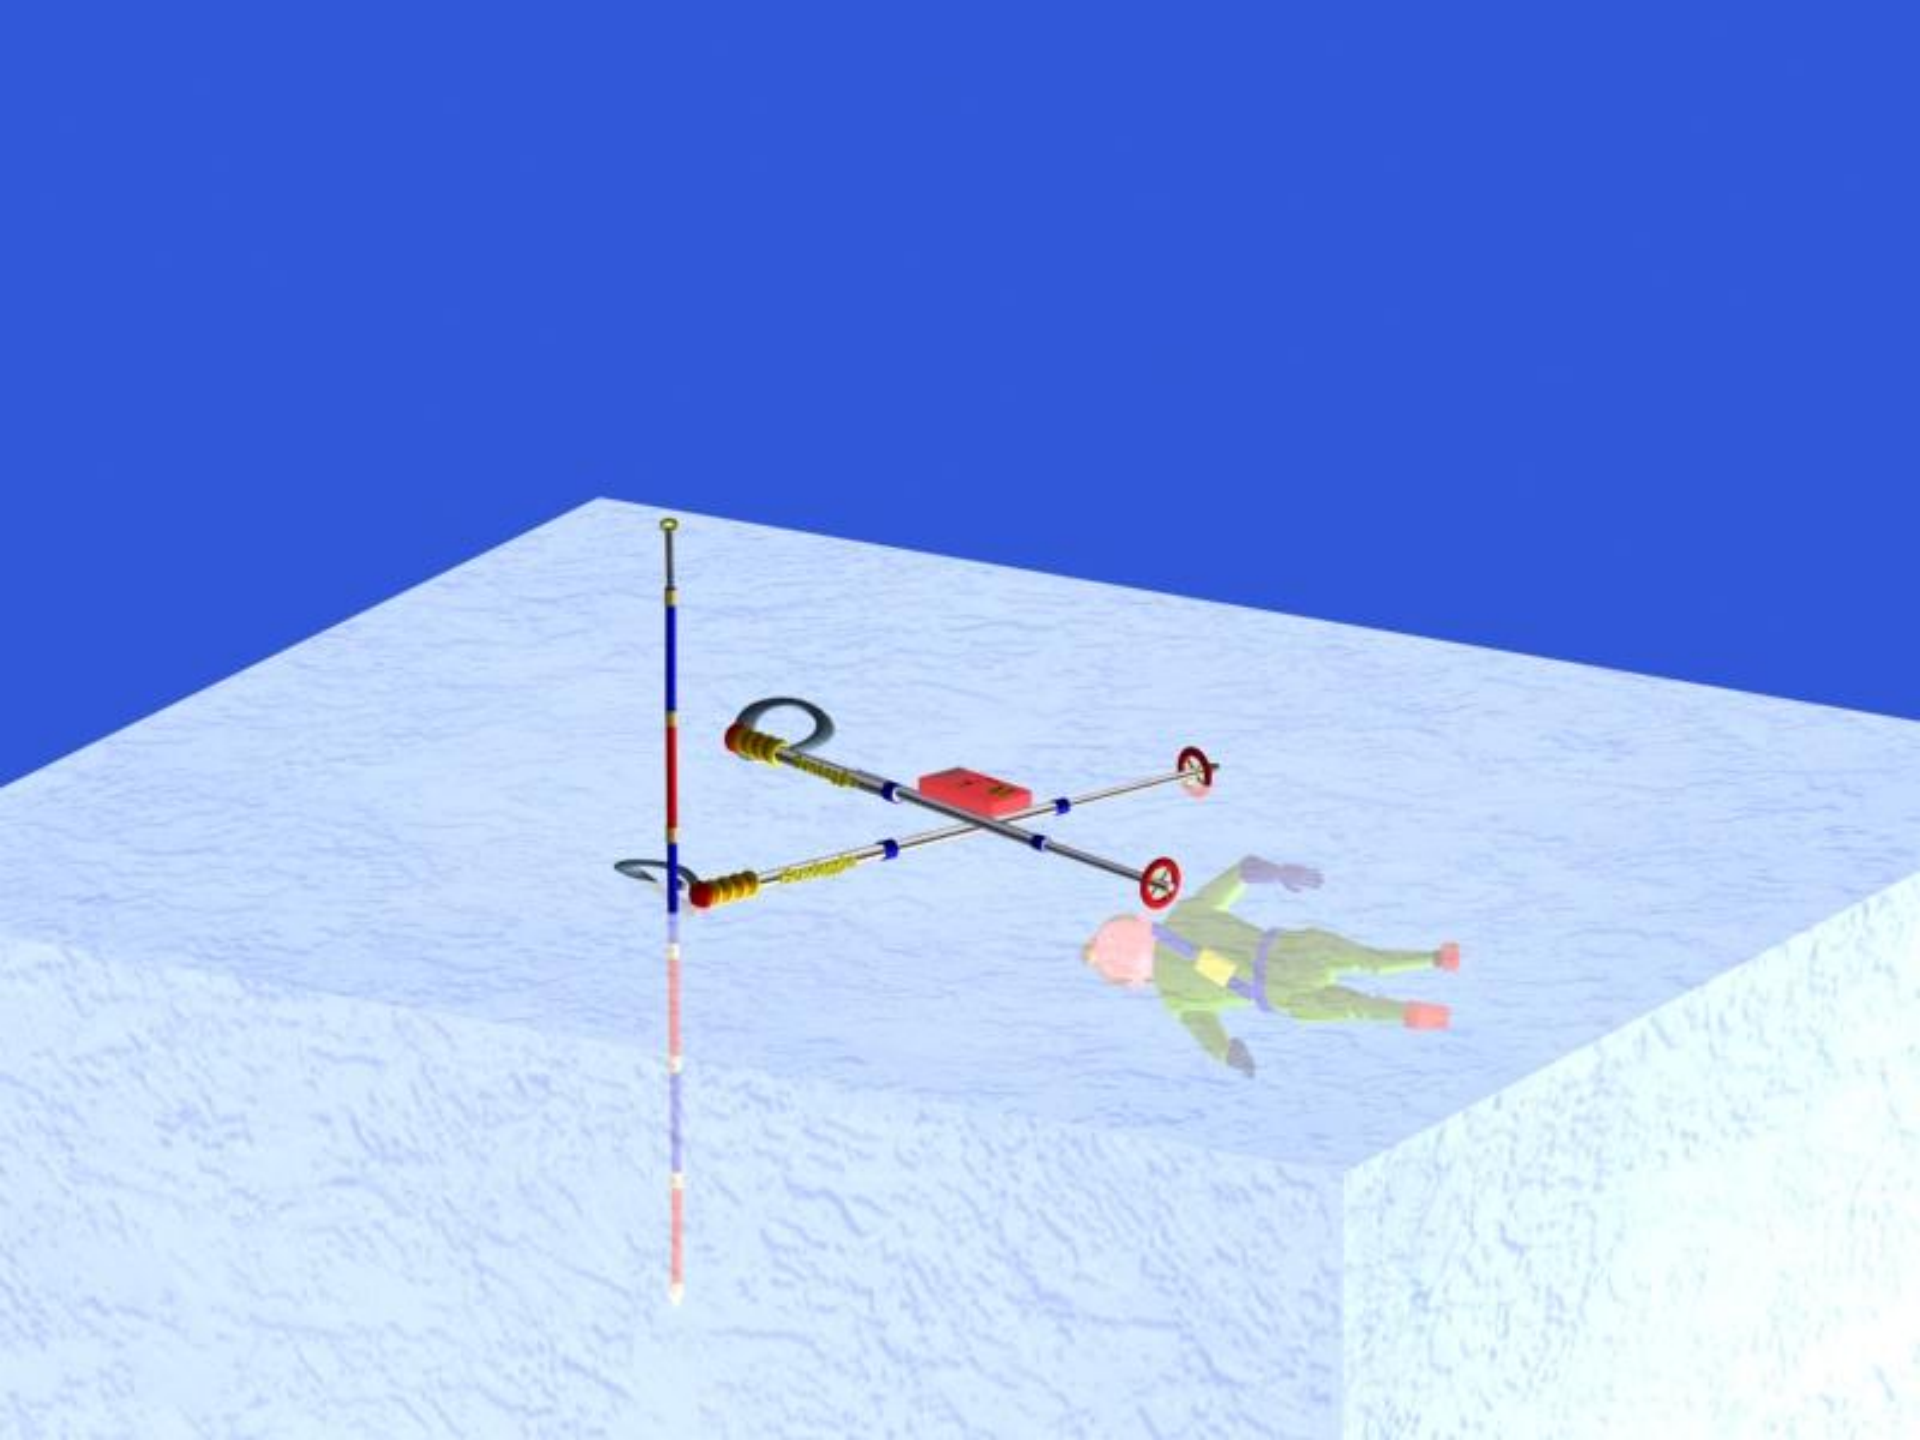

By Alfio Riva

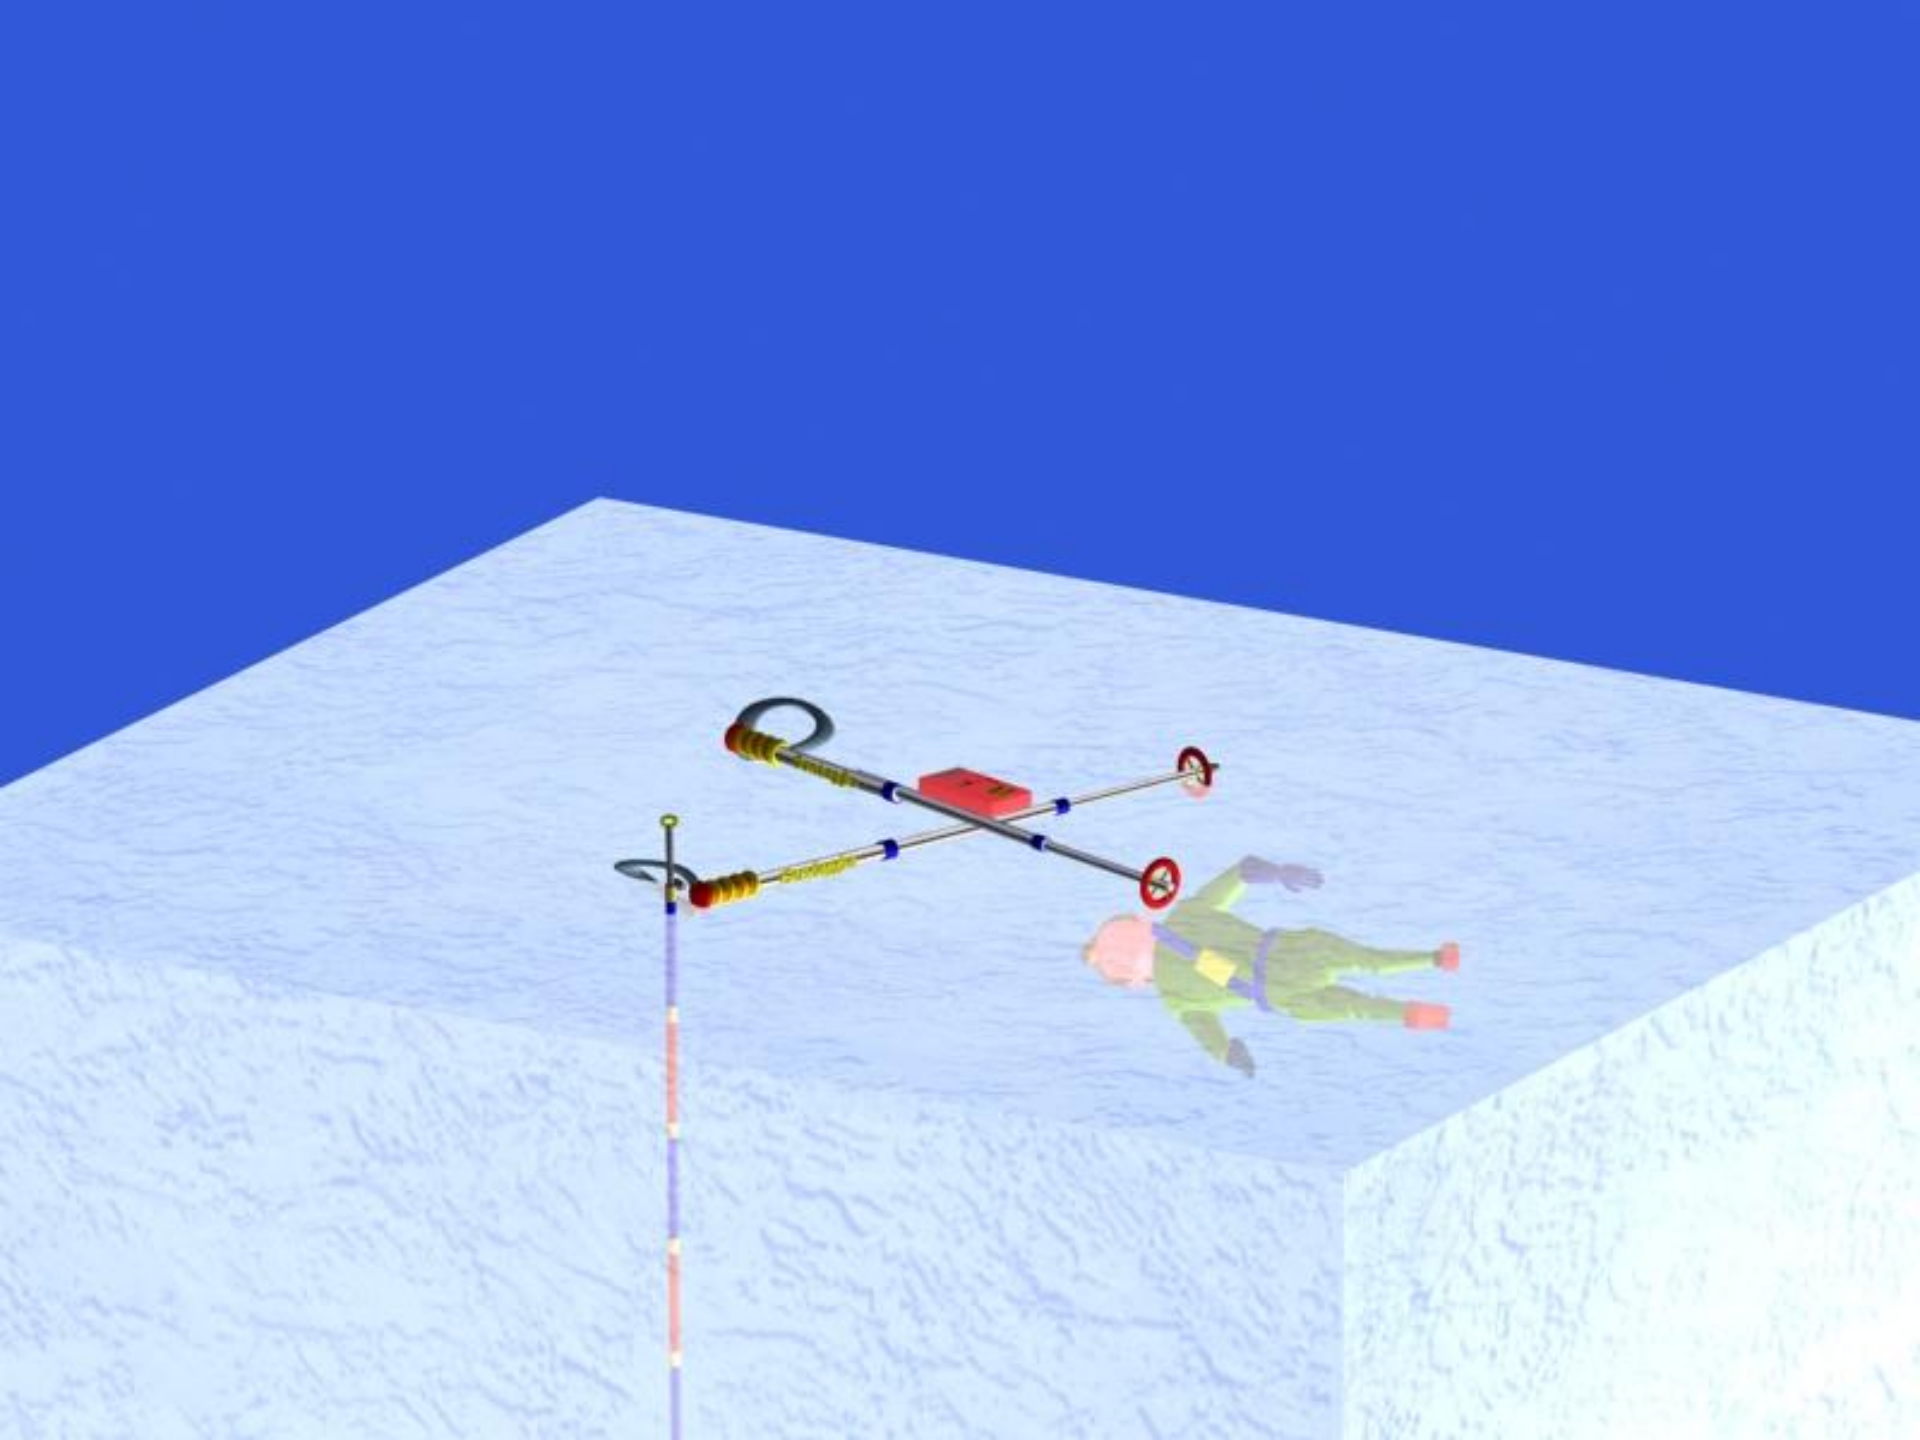

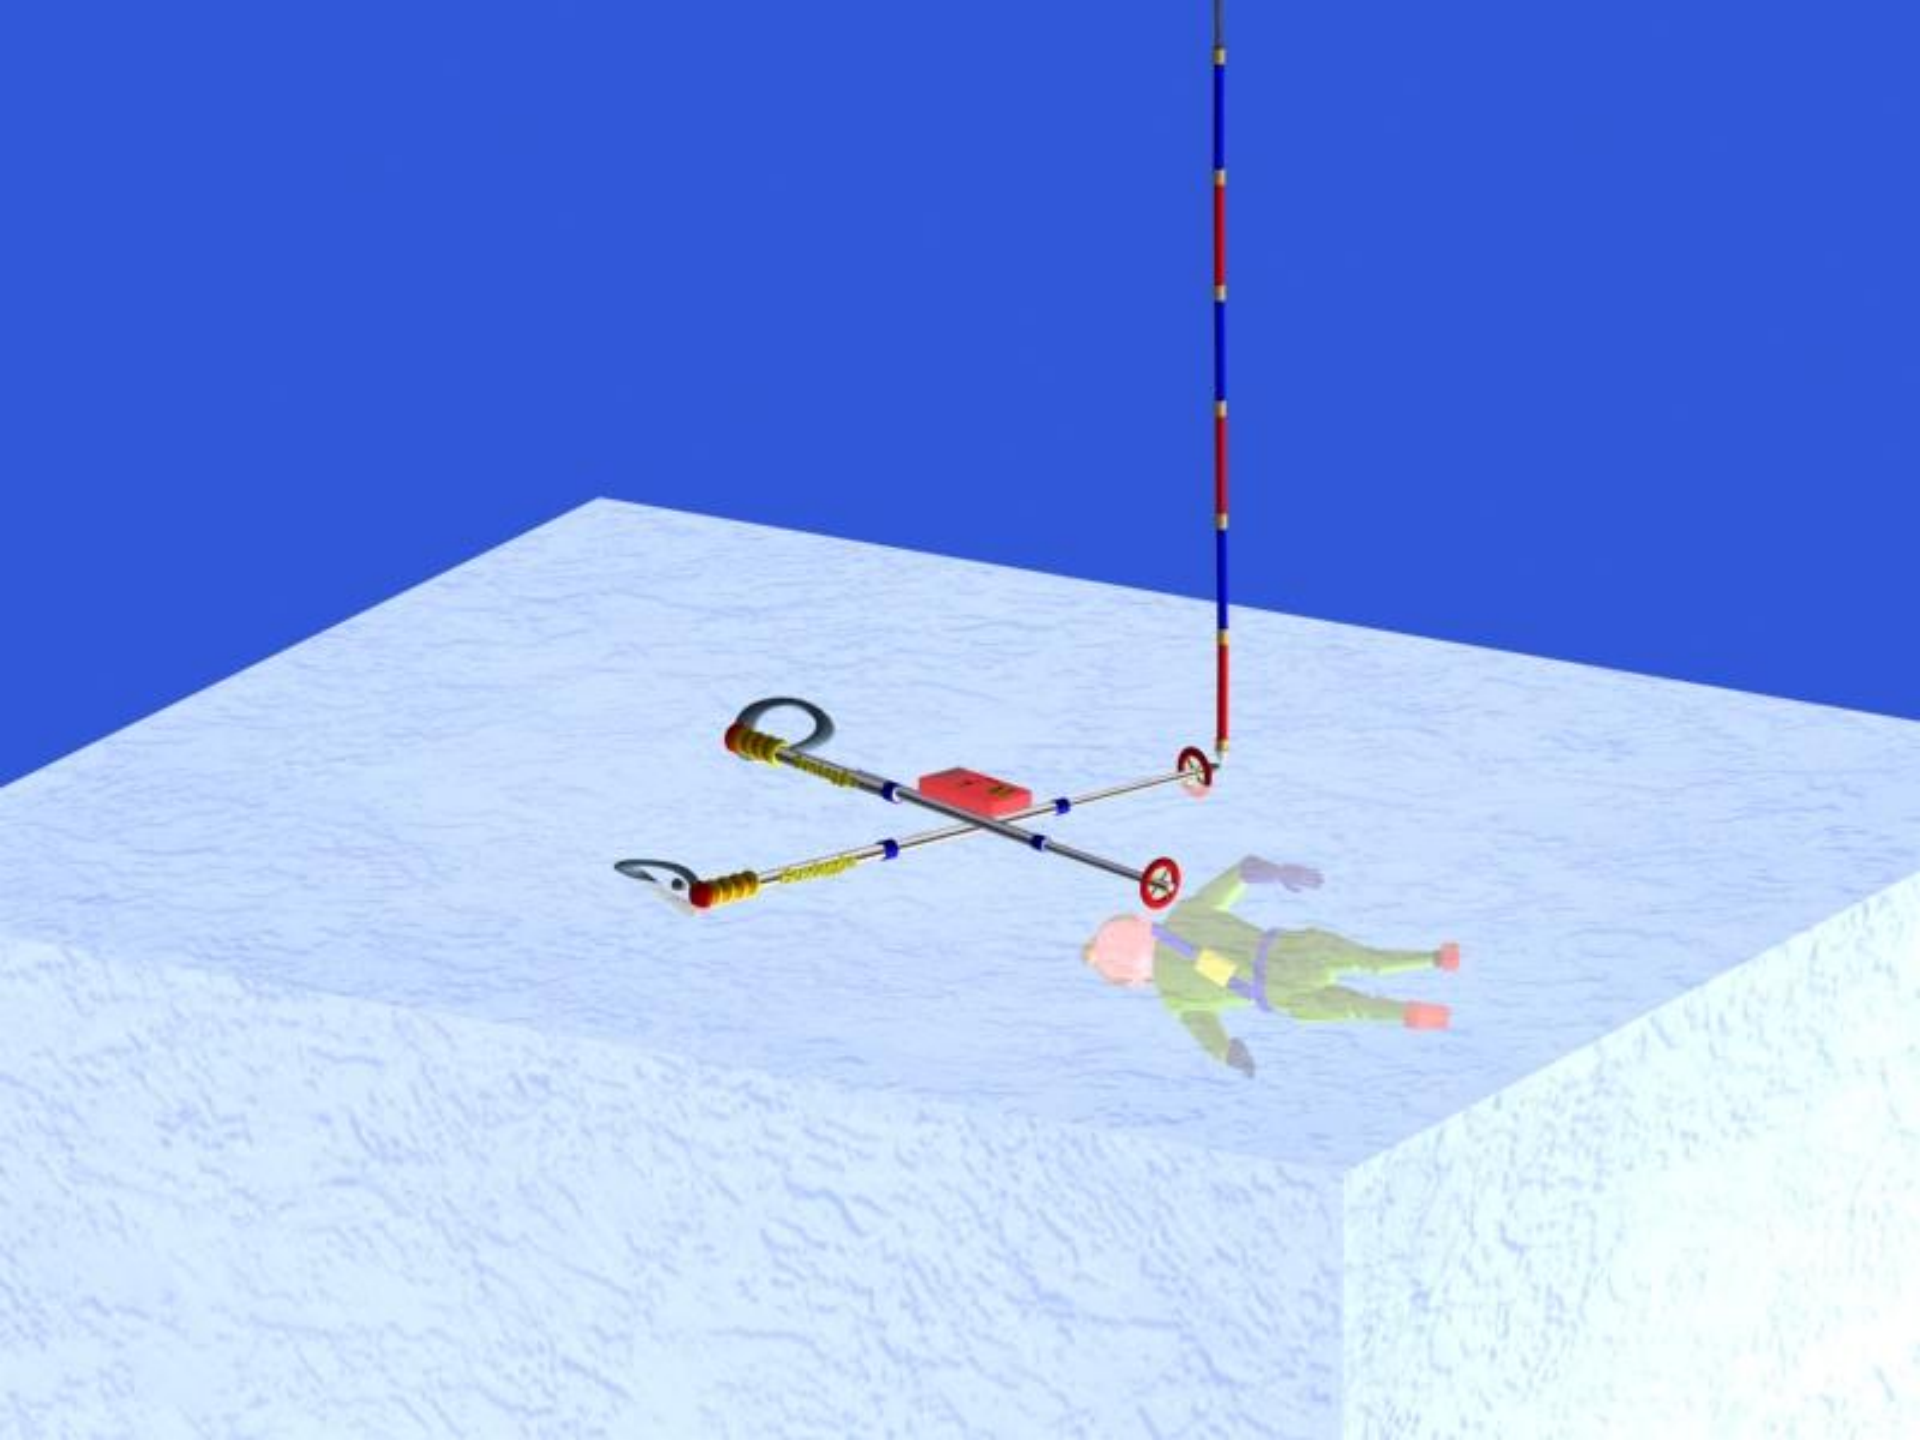

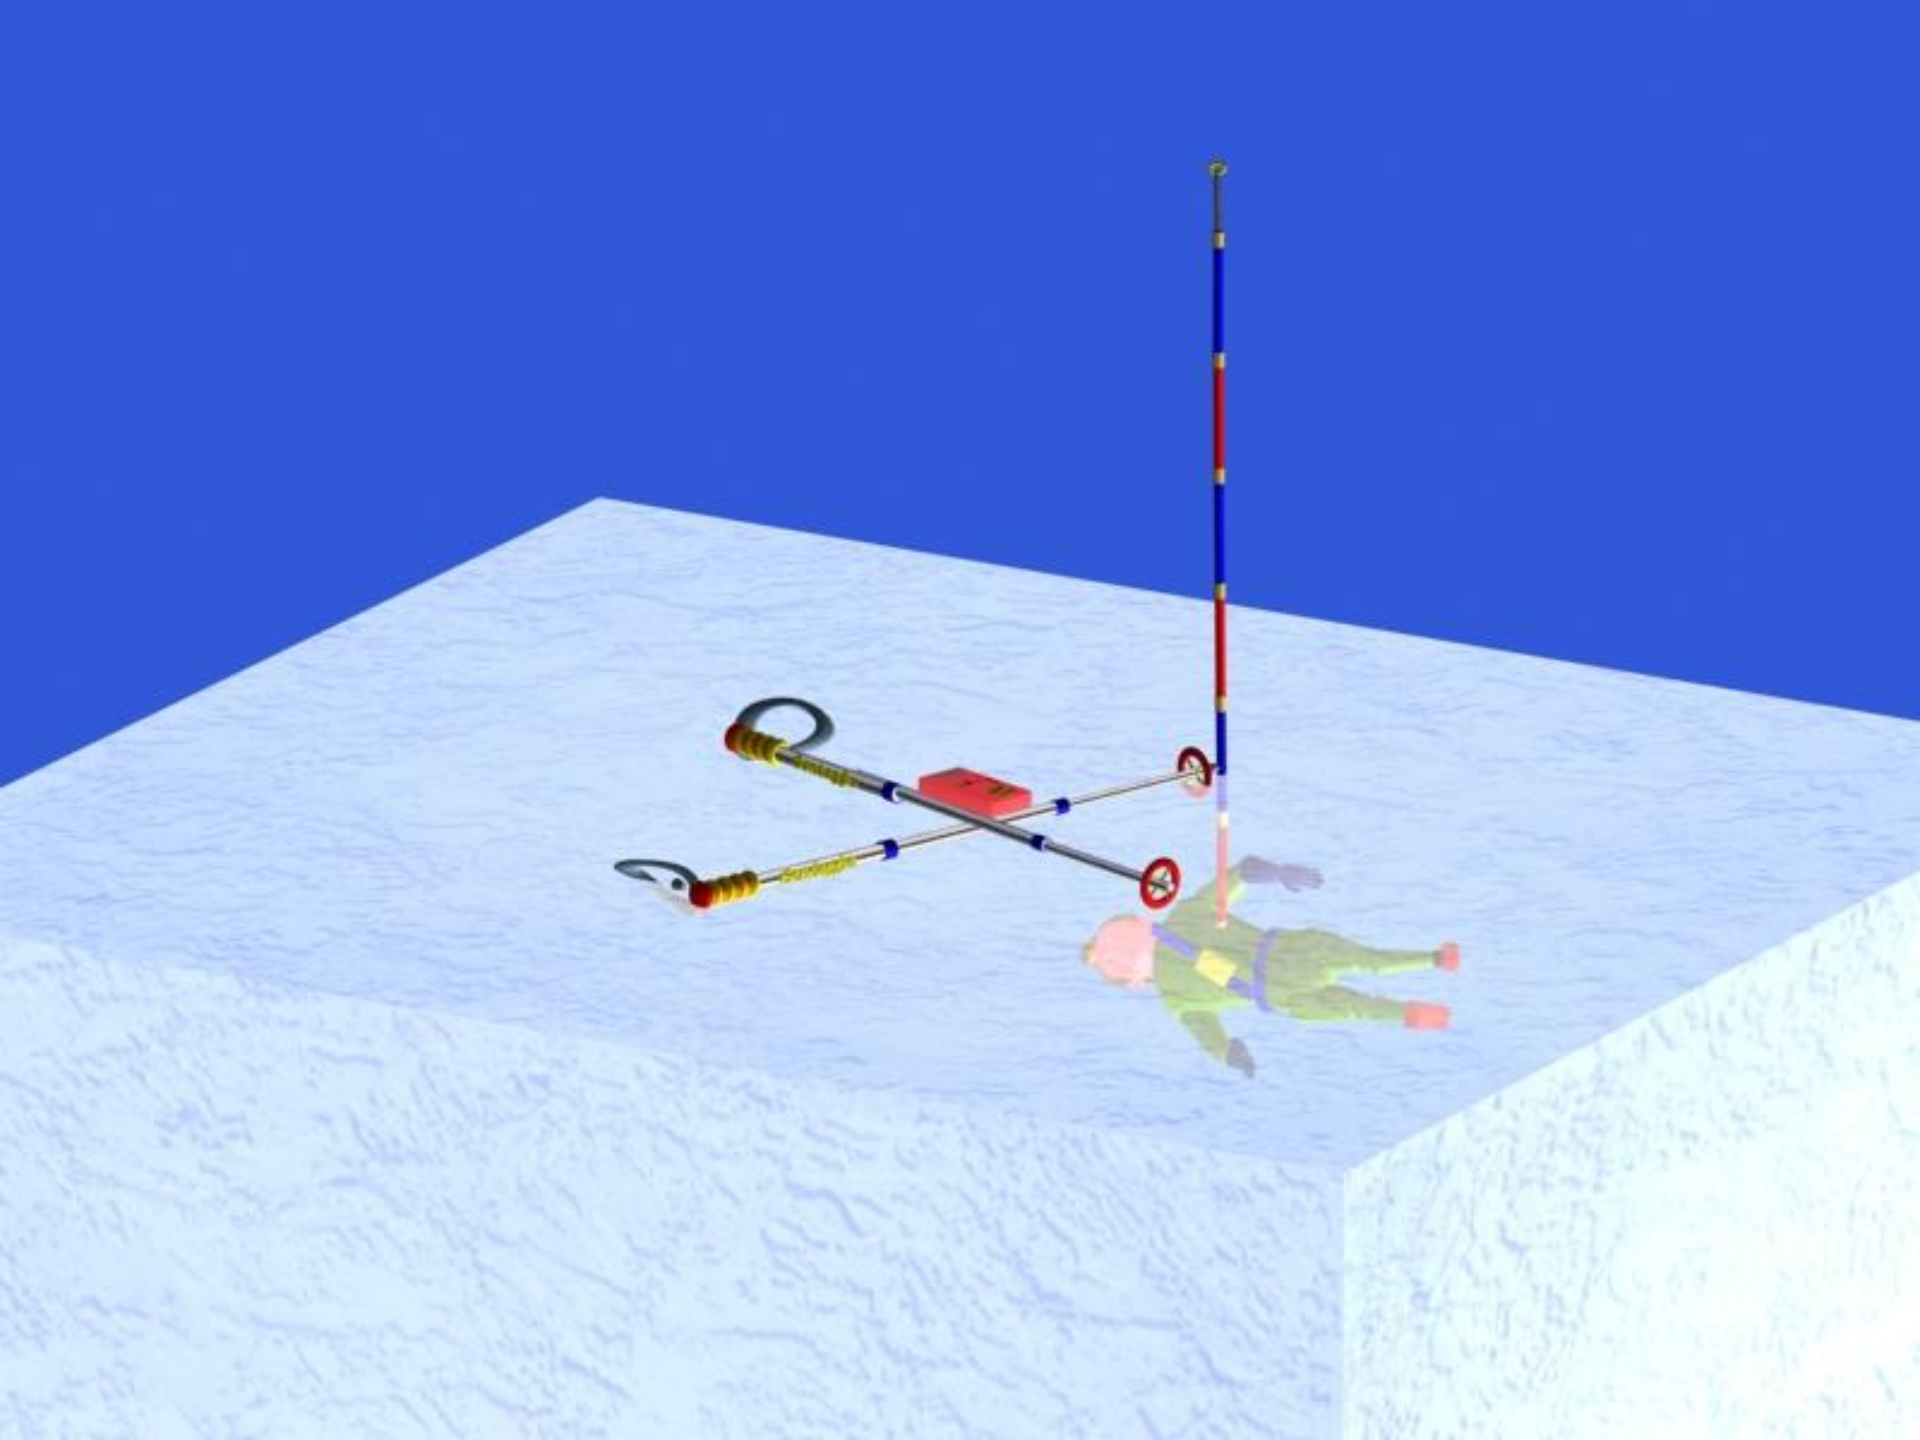

YES

Dopo aver sondato ai vertici delle racchette da sci e la risposta fosse ancora negativa, si passerebbe al sondaggio per maglie più strette.

Posizionare la sonda in mezzo tra i due vertici dei bastoncini e sondare nuovamente
